Email SaaS Platform — Project Proposal

Centralized email management with team collaboration, AI and automation

Objective

• Build a centralized **email management SaaS platform** where users can connect multiple email accounts and manage all emails from one Outlook-like dashboard.

Core Features

• Connect multiple **Gmail, Outlook/Microsoft 365, and IMAP/SMTP** accounts

• Unified inbox for all connected accounts

• Send, Reply, Reply All, Forward and Attachments

• Search, filters, labels, folders and email status

• Teams, users, roles and email assignment

• Internal notes and notifications

AI Features

• AI email summarization

• AI-generated replies

• Email classification

• Priority and sentiment detection

• Smart email routing

• AI-powered auto-reply

Automation

• Rule-based email filters

• Auto assignment

• Auto labels and priority

• Automatic notifications

• Auto-reply workflows

• Scheduled actions and webhooks

Full Control

All AI and automation features will have **ON/OFF settings** at organization, email-account, team and user levels.

• AI provider and API credentials

• AI prompts

• Auto-reply rules

• Approval requirements

• Notification rules

• Usage limits

• Automation rules

Technology

Backend	Python + FastAPI	**Database**	MySQL
Queue	Redis + Celery	**Frontend**	React

The architecture will be **multi-tenant, secure and scalable**, allowing additional email providers, AI providers and automation features to be added later.

Development Approach

Phase 1	Core Email & Unified Inbox

Phase 2	Teams & Automation
Phase 3	AI Features
Phase 4	Auto-Reply & Smart Workflows
Phase 5	SaaS Billing, Analytics & Enterprise Features

Goal

Create a single platform that combines **Email Management + Team Collaboration + AI + Automation** into one scalable SaaS product.
